

Company profile

Dartcom is one of the leading manufacturers and integrators of weather satellite and remote sensing ground stations.

We are a dedicated team of hardware engineers, software engineers, installers, trainers and support staff with over 36 years of experience in the field.

We provide our customers with low-cost, high-quality, high-performance, innovative solutions for satellite data ingest and processing in land-based, marine and portable environments.

Our wide range of products covers the following types of satellite data:

- X-Band EOS from Terra, Aqua, Suomi-NPP, JPSS, FY-3 and Metop-SG satellites.
- HRPT from the NOAA series.
- AHRPT from the Metop series.
- DMSP from the DMSP-5D series.
- EUMETCast (MTG, MSG, Electro-L, GOES ABI level 1b) and HimawariCast.
- GOES HRIT and GK-2A LRIT/UHRIT.

Design and manufacturing

We develop our own in-house hardware and software as well as integrating key components from specialist suppliers.

All products are designed for maximum performance, reliability and ease-of-use.

Our software provides an extensive range of ingest, display and processing facilities such as archiving, calibration, animation, map overlays, reprojection, enhancement, masking, product generation and output of data in common third-party file formats.

Sales

We supply systems worldwide and have a network of distributors covering Europe, the Middle East, India, Asia, the USA and South America.

Support

We provide training and support directly or through our distributors and run a popular website containing news updates, product information, software updates and a technical support portal, plus a Dartmoor webcam and weather station.
